

TIMOTHY SEGUN-OLUFEMI

Security Analyst | Junior Penetration Tester | ISC2 CC Certified
Lagos, Nigeria • 08150931129 • Timmyhacks@proton.me • linkedin.com/in/timothy-segun-olufemi-834b3b246

PROFESSIONAL SUMMARY

Security Analyst with hands-on experience in network traffic analysis, web application vulnerability assessment, and penetration testing fundamentals. ISC2 CC Certified with practical use of Wireshark, OWASP ZAP, and WebGoat. Understands attacker methodology from both detection and exploitation perspectives. Seeking a Security Analyst or SOC role as a foundation for a career in offensive security.

KEY PROJECTS

Network Security Analysis & Web Application Penetration Testing

Redynox Cybersecurity Internship | 2025 — Network Security · Web App Security · Vulnerability Exploitation

- Analysed live network traffic using Wireshark, classifying DNS, HTTP, and TLS packets and identifying a real vulnerability: router admin interface communicating over unencrypted HTTP, exposing credentials to interception
- Configured Windows Defender Firewall rules, blocking insecure legacy protocols (Telnet) and restricting unauthorized inbound connections
- Performed automated scanning using OWASP ZAP on WebGoat, identifying SQL Injection, XSS, and CSRF vulnerabilities; manually exploited SQL Injection to demonstrate unauthorized database access and record manipulation

Tools: Wireshark · OWASP ZAP · WebGoat · Windows Defender Firewall

Hybrid Phishing Detection System

Email Security · Machine Learning

- Analysed phishing attack construction — studying URLs, sender behaviour, and message patterns to understand attacker techniques
- Developed a detection framework combining rule-based logic and ML classification; evaluated using accuracy, recall, and F1-score metrics

Focus: Attack Analysis · Threat Detection · Offensive Thinking

Linux Security Practice — Bandit Wargame (In Progress)

OverTheWire Platform

- Progressing through Bandit wargame, building practical Linux skills: file navigation, permissions, SSH access, and CLI enumeration through hands-on security challenges

Focus: Linux Fundamentals · SSH · Enumeration

TryHackMe — Junior Penetration Tester Path (In Progress)

- Completing hands-on labs focused on reconnaissance, enumeration, privilege escalation, web application attacks, and network exploitation
- Practising real-world penetration testing workflows using Kali Linux, Nmap, Burp Suite, Hydra, and Metasploit
- Developing practical understanding of attacker techniques, vulnerability discovery, and post-exploitation methodology

Focus: Penetration Testing · Enumeration · Web Exploitation · Privilege Escalation

CERTIFICATIONS

◆ Certified in Cybersecurity (CC)

ISC2 | 2026

◆ ISO/IEC 27001:2022 ISMS

S&BP Training | 2023

EDUCATION

B.Sc. Computer Science & IT

Bowen University | Nov 2025

TECHNICAL SKILLS

Tools

Wireshark, OWASP ZAP, WebGoat, Windows Defender Firewall, Linux (Kali), OverTheWire

Security Focus

Network analysis, web app pentesting, vulnerability exploitation, threat detection, offensive security

Frameworks

ISO/IEC 27001, ISC2 CC, OWASP Top 10

Soft Skills

Analytical thinking, problem solving, documentation, collaboration

CORE COMPETENCIES

- Threat Detection & Analysis
- Security Operations (SOC)
- Offensive Security Fundamentals
- Network Security & Traffic Analysis
- Web App Penetration Testing
- Incident Awareness
- Email Threat Intelligence
- Attacker Mindset & Enumeration
- Linux & CLI Proficiency
